

— COURSE SYLLABUS · 11 WEEKS

Operate the agent. Ship the proof.

You don't build Ghost — you operate it. Over ten weeks you learn to direct a working agent, debug it when the first output isn't right, and deploy it under guardrails. Every session produces a real artifact, and Demo Day is the assessment. Complete the course and you earn a certificate — backed by a working agent, not just a slip of paper.

CORE LECTURES

10

HANDS-ON LABS

Wk 11

DEMO DAY

1

CERTIFICATE

The classroom track

01

Using Ghost & Understanding the System

Operate Ghost as a ready-to-work agent, learn the OpenClaw architecture — memory, tools, skills, workflows — and build your first website today.

DELIVERABLE

A working website + reusable instruction pattern

02

Directing, Debugging & Improving Ghost

Steer the agent when the first output isn't perfect: give better instructions, catch failure modes, and turn one-off tasks into repeatable workflows.

DELIVERABLE

A debugging checklist + instruction template

03

Safety, Guardrails & Real-World Deployment

Decide what Ghost can do, what needs approval, and what's never allowed. Human-in-the-loop design, prompt injection, and data privacy.

DELIVERABLE

A Ghost permission policy + safe workflow

From one agent to a system of them

WEEK

01

SYSTEM &
MEMORY

LECTURE 1

Using Ghost & Understanding the System

HANDS-ON

Stand up your Ghost on Discord; run the four debugging prompts

LAB 0 + 1

Setup & Debugging Toolkit · Memory → Living Site

WEEK

02

DIRECTING

LECTURE 2

Directing, Debugging & Improving Ghost

HANDS-ON

Steer the signal; debug relevance, not prose

LAB 2

Daily Briefing Agent

WEEK

03

SAFETY

LECTURE 3

Safety, Guardrails & Real-World Deployment

HANDS-ON

Chain multi-step workflows; add the first approval gate

LAB 3

Research → Published Asset

WEEK

04

GUARDRAILS

LAB 4

Stateful Monitor + Permission Policy

BUILD

A repeatable monitor that reports only what changed, under a policy you author, refusing hidden instructions

PROOF

Permission policy + "what changed" report + a documented injection defense

WEEK

05

CAPSTONE I

LAB 5

Deploy Ghost as a Shared Operator

BUILD

The whole stack as one persistent operator — memory, artifacts, workflows, state, guardrails

PROOF

Deployed workflow + runbook + a Demo Day story

WEEK
06

ANALYTICS /
OPS

LAB 6

BUILD

PROOF

Data → Decision

Ghost ingests a real dataset and ships a dashboard that leads with the decision

A live dashboard + a recommendation defended with cited numbers

WEEK
07

SALES /
GROWTH

LAB 7

BUILD

PROOF

Growth Engine

Ghost researches prospects and drafts personalized outreach at volume, policy-gated

A batch of policy-gated drafts + the research trail behind each

WEEK
08

SUPPORT /
SERVICE

LAB 8

BUILD

PROOF

Inbound Responder

Ghost answers strictly from a knowledge base and escalates the moment it's unsure

A live responder + a logged escalation of an out-of-scope question

WEEK
09

ORCHESTRATION

LAB 9A

BUILD

PROOF

Multi-Agent Operation — design & build the roles

Define and stand up each role — researcher, drafter, reviewer, publisher — in isolation

Each role proven to do its single job well before any wiring

WEEK
10

ORCHESTRATION

LAB 9B

BUILD

PROOF

Multi-Agent Operation — orchestrate & harden

Wire the handoffs, add a QA gate where one Ghost checks another, and add recovery when a step fails

A coordinated multi-agent operation + the Demo Day story

WEEK
11

DEMO DAY

★ FINAL

Demo Day

— THE WEEKLY RHYTHM

A typical week, Monday to Thursday

MON Monday	TUE Tuesday	WED Wednesday	THU Thursday	FRI Friday
LECTURE · WEEKS 1–3 Core Lecture Concepts and architecture. Weeks 1–3 only.	OFFICE HOURS Office Hours Drop-in help to unblock your Ghost.	HANDS-ON Hands-On Lecture Build live and ship the day's artifact.	OFFICE HOURS Office Hours One-on-one help and progress checks.	NO SESSION Nothing scheduled Open time to keep building.

— COURSE LOGISTICS

How the course runs

OFFICE HOURS

Weekly, Weeks 1–10. Drop in to debug a lab, unblock your Ghost, or pressure-test a guardrail before you ship it.

WHAT YOU LEAVE WITH

A working Ghost agent, a portfolio of deployed artifacts, debugging instincts, safety guardrails, a Demo Day piece, and a course certificate.

CONTACT

chloe@inference.ai

THE BOTTOM LINE

Show a working agent, not a certificate — then take the certificate too.
